

XCarrier Core

XCarrier Development Platform

Design standards, basic database configurations, the GUI designer, basic application functionalities, test routines, automated documentation and XDesk form the core of the XCarrier Development Platform.

XCarrier Configuration

The modularization concept, the Data Guard HA (High Availability) configurations, the instance configuration, the API management and the security configuration are carried out in XCarrier Configuration.

XCarrier Management

Integrated and customer-specific database management (DG, RMAN, ACL, users, roles, assignments), upgrades and patches, the actual data management and the metrics of the system are defined in XCarrier Management.

XCarrier Monitoring

XCarrier Monitoring covers all layers from hardware to applications. It forms the foundation of integrated, high-quality management.

XCarrier Core Functions

XCarrier Core functions include generic and reusable functionalities such as search functions, filters, import/export of data formats, file transfer, data conversion, integrations, data analyzer and many more useful features.
