XCarrier
Management

Functionalities include database and data management, installation management and upgrade management, as well as metrics specifications.

Data management includes cleaning up and handling aging transaction data and files.

Database management includes the instructions for Oracle Data Guard, RMAN, Oracle Data Pump, security for Java, ACL, database user recording, role and authorization assignments.

System setup, upgrade handling, patches for extensions and new configurations or hotfixes due to governance and compliance requirements are easily implemented using XCarrier Management. Work instructions for upgrades, patches, hotfixes and system reviews are defined with metrics and measured accordingly and corrected if necessary.
